```
Question 1
Correct
Mark 1.00 out of 1.00
```

Assume you are an awesome parent and want to give your children some cookies. But, you should give each child at most one cookie.

Each child i has a greed factor g[i], which is the minimum size of a cookie that the child will be content with; and each cookie j has a size s[j]. If s[j] >= g[i], we can assign the cookie j to the child i, and the child i will be content. Your goal is to maximize the number of your content children and output the maximum number.

## Example 1:

## Input:

3

123

2

1 1

## **Output:**

1

Explanation: You have 3 children and 2 cookies. The greed factors of 3 children are 1, 2, 3.

And even though you have 2 cookies, since their size is both 1, you could only make the child whose greed factor is 1 content.

You need to output 1.

## **Constraints:**

```
1 <= g.length <= 3 * 10^4
0 <= s.length <= 3 * 10^4
1 <= g[i], s[j] <= 2^31 - 1
```

Answer: (penalty regime: 0 %)

```
#include<stdio.h>
2
    #include<stdlib.h>
    int compare(const void *a,const void *b){
3 •
        return (*(int*)a-*(int *)b);
5
6 v int find(int *g,int gs,int *s,int ss){
7
        qsort(g,gs,sizeof(int),compare);
8
        qsort(s,ss,sizeof(int),compare);
9
        int cc=0;
10
        int ci=0;
        for(int i=0;i<gs&&ci<ss;i++){</pre>
11 1
             if(s[ci]>=g[i]){
12 •
13
                 cc++;
14
                 ci++;
15
             }
16
            else{
17
                 i--;
18
                 ci++;
19
             }
20
21
        return cc;
22
23 v int main(){
24
        int g,s;
        scanf("%d",&g);
25
26
        int h[g];
        for(int i=0;i<g;i++){</pre>
27
28
             scanf("%d",&h[i]);
29
        scanf("%d",&s);
30
        int k[s];
31
32 •
        for(int i=0;i<s;i++){</pre>
33
             scanf("%d",&k[i]);
34
        int r=find(h,g,k,s);
35
36
        printf("%d\n",r);
37
        return 0:
38
```

39 40 }

	Input	Expected	Got
